COURSE DESCRIPTION

This Harvard Macy Institute modular course supports health care professionals as they adapt new technologies and approaches into the learning environment for pre-clinical, clinical and post-graduate learners. The course integrates the science of education with hands-on experience to support the transformation of teaching through the creation of effective synchronous and asynchronous virtual learning experiences and environments. Facilitated by educational leaders with expertise in using technology for teaching, this course will incorporate large and small group sessions with hands-on experiences, consultation to facilitate the development of your personal teaching projects, and opportunities for practice utilizing new technologies. At the end of this course, educators will have developed a toolbox containing the essential skills to embark on transforming learning and teaching for the virtual environment.

COURSE SCHEDULE:

Two hour sessions held every Tuesday evening 7PM - 9 PM (Eastern time) from February 23, 2021 to April 27, 2021.

LEARNING OBJECTIVES

Upon completion of this course, participants will be able to:

- Transform your personal teaching activities into effective and interactive on-line experiences
- Apply a deliberate approach to aligning learning, teaching, and technology
- Integrate technologies and digital strategies to facilitate assessment, collaboration, co-creation, and active learning
- Devise strategies to utilize data and learning analytics
- Foster an experiential, collaborative virtual learning environment
- Reflect upon technological applications and adaptations for your own teaching and learning environment
- Examine novel emerging technologies such as serious gaming, augmented and virtual reality, and virtual simulation
